

Diaphragm Pump

Approximate dimensions:
35.5" H x 32.5" W x 16" D

Specifically designed for the poultry, Berry's sanitary diaphragm pump can handle most any of your solids pumping needs.

The sanitary diaphragm pump is one of the few pumps specifically designed for the poultry industry and can easily handle solids such as the following:

- Gizzards • Hearts Livers • Chicken Necks
- Feet • Blood Slurries • Other Solids

Features

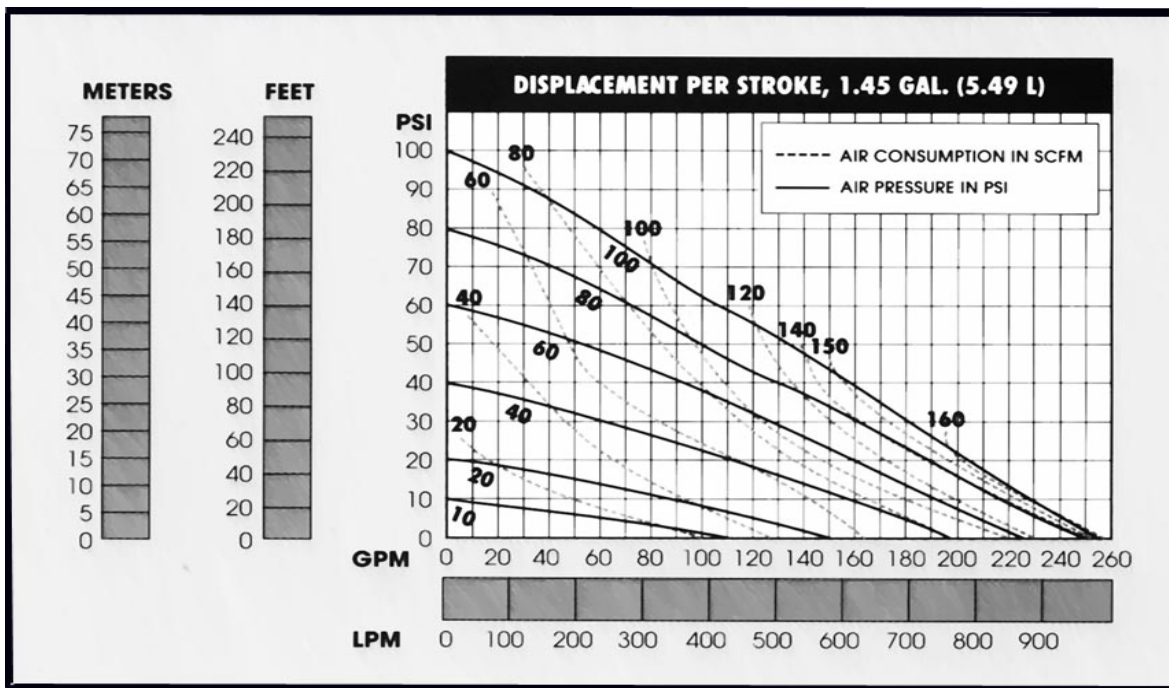

By simply adjusting the air supply, the double diaphragm pump offers variable flow and discharge pressure up to 125 PSI. One pump can fit a broad spectrum of applications. Whether you're pumping a few gallons or 240 gallons per minute, you get the advantage of unlimited pumping capabilities.

There are no packing glands and no close-fitting, sliding or rotating parts to maintain. And because you have the ability to vary flow and discharge pressure, one pump can be used for a wider range of applications.

The pump stops immediately if discharge is clogged or closed, which means less power is consumed with no heat buildup and less wear. Just open the discharge and flow starts automatically.

Flap check valves with 3" diameter openings are a standard on this pump.

The air valve assembly is anti-stalling, non-icing and lubrication free.

3" PERFORMANCE CURVE

The specifications as stated herein are the most current at the time of publication. However, consistent with our standard of continual product development, we reserve the right to change the design without notice or obligation to modify any equipment previously sold or delivered. 12/31/2000
