

Front Half Stationary Cone Debone Line

The **Berry Front Half Stationary Cone Debone Line** is designed for each station to do the entire cutting process all at one cone. The top belt carries the front halves to the debone stations. Personnel at each station can mount the front half onto a uhmw cone, remove the skin, right & left wings, placing each into a designated chute. The filet is placed on the center belt and the remaining carcass has a chute of it's own to be placed in. The chutes allow the parts to drop onto the lower conveyor divided into four lanes to keep the parts separated and transports them to the end of the conveyor.

HEIGHT	APPROX 72"
WIDTH	APPROX 34"
LENGTH	OAL APPROX 421"

Construction:

The **Berry Front Half Stationary Cone Debone Line** is constructed of quality stainless steel with uhmw cones and Intralox belting. The frame is built with adjustable legs for height adjustment.

Maintenance:

Daily cleaning of all surfaces and parts as well as weekly preventive maintenance of bearings and drives.

Options:

- Adjustable Ergo Stands
- Scales (assist in yield control)
- Stainless Steel Cones
- Trim Drawers
- Belt Type
- Number of Debone Stations

The specifications as stated herein are the most current at the time of publication. However, consistent with our standard of continual product development, we reserve the right to change the design without notice or obligation to modify any equipment previously sold or delivered. 12/31/2000
